

TopYacht Database Integrity: Suggestions.

Background:

Control of Databases can cause difficulties where more than one person needs to access it for various reasons. Strict controls and very strong lines of communication must be in place when people take the database home to do some work on it. Since this relies on communication these lines can easily get broken, with one person modifying the database at home and another takes a copy before the first person returns it.

Remote access (via a network or Internet) would permit such modifications to be made on the database hosting TopYacht, thus eliminating such communication failures.

A software package such as AnyDesk¹ offers such a function.

Prerequisites:

- The computer hosting TopYacht being powered up.
- AnyDesk loaded on the computer hosting TopYacht. This copy must be configured with a password to permit remote access.

Virgin downloads of TopYacht include a copy of AnyDesk can be accessed from <C:\Users\Public\Documents\TopYacht\utils> or it can be downloaded from the [AnyDesk Website](#)

- A similar copy of AnyDesk loaded on the remotely located computer.
- An internet connection capable of reasonable speed. (the slower the connection, the longer the response time)
- Knowledge of the AnyDesk Address of the computer hosting TopYacht (see [Appendix 1](#)); and
- Knowledge of the Password

Use:

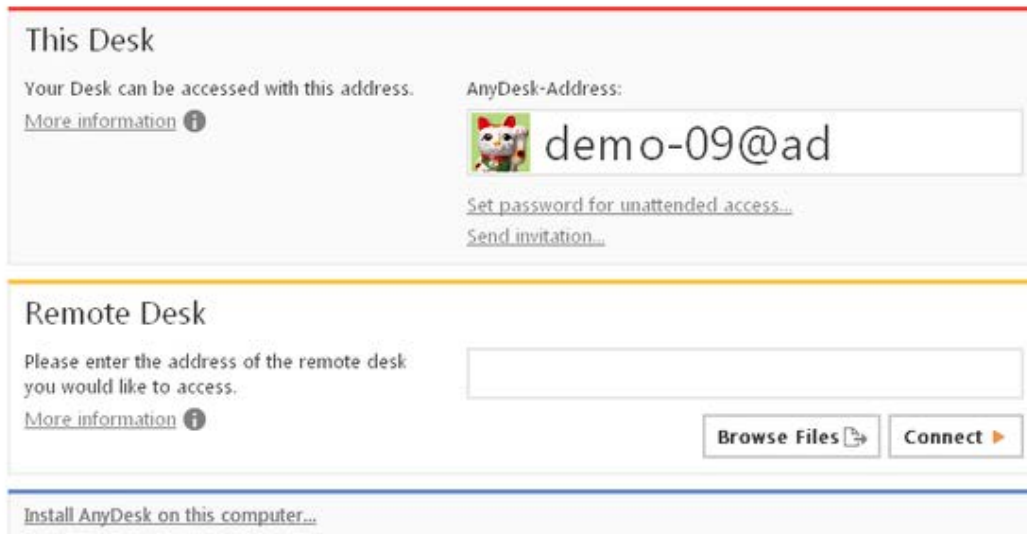

The user

- enters the AnyDesk address of the computer hosting TopYacht,
- Clicks 
- When prompted, enters the AnyDesk password of the computer hosting TopYacht.

The remote desktop will appear. The user can carry out **any** transaction on the computer hosting TopYacht as though they were in front of the actual computer, including running TopYacht.

Appendix 1

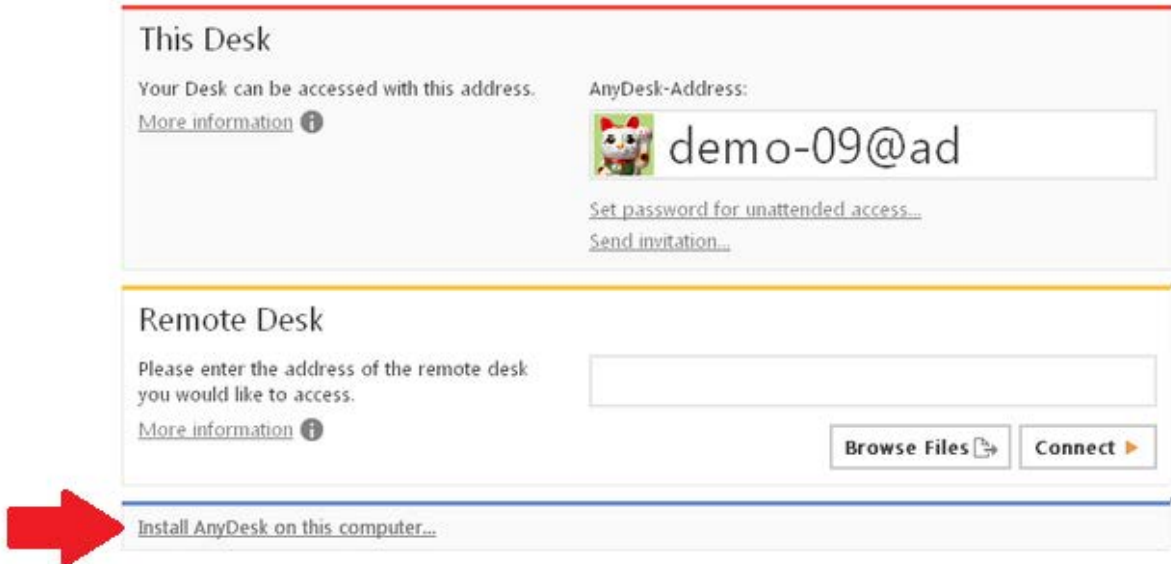

The screenshot shows the AnyDesk startup interface. It is divided into three main sections:

- This Desk:** This section displays the user's own AnyDesk address. It includes the text "Your Desk can be accessed with this address." followed by a "More information" link. The "AnyDesk-Address:" is shown as "demo-09@ad" next to a small avatar icon. Below this are links for "Set password for unattended access..." and "Send invitation...". A red arrow points to the address field.
- Remote Desk:** This section prompts the user to "Please enter the address of the remote desk you would like to access." It features an empty input field and two buttons: "Browse Files" and "Connect".
- Footer:** A link at the bottom says "Install AnyDesk on this computer..."

Typical AnyDesk Startup Page
The Unique AnyDesk address is indicated

Appendix 2

This Desk

Your Desk can be accessed with this address.
