TopYacht Database Reset.

Synopsis

On rare occasions, an update of the database can be missed with new releases of TopYacht.

This procedure will force TopYacht to update a database to make any field additions to the database tables as needed.

If TopYacht encounters a missing field during execution, it will crash.

Routinely the last line of the crash report will read something like '**ABCDEFGH_IJK-L not found**', where 'ABCDEFGH_IJK-L' in the field name in one of the tables of the TopYacht database
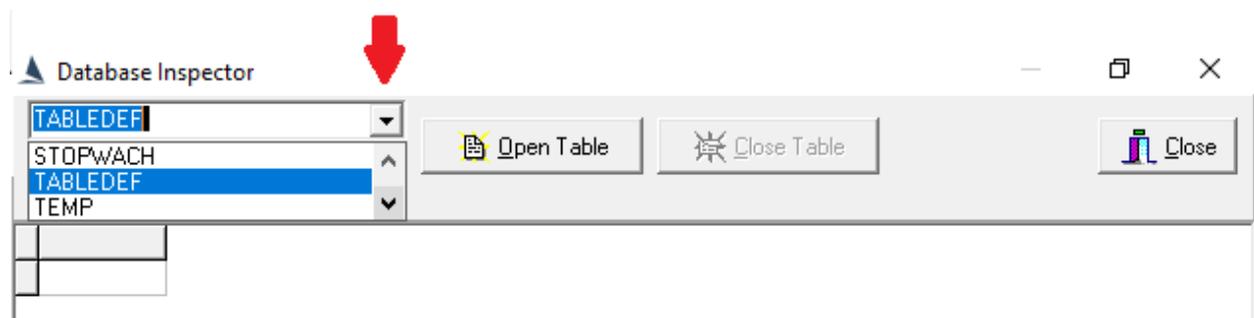

Warning:

Only perform this operation when directed to by TopYacht Tech Support.

Admin Mode | Database | Check:
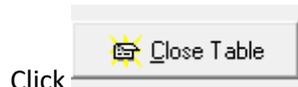

Click:

Click on the dropdown box, scroll to TABLEDEF.

Click

Identify DB_DATE Field

Change the date to (say) five years earlier e.g. 01/01/2017.

Press ***Enter***

Click

Close TopYacht

Restart TopYacht

The restarting of TopYacht will force the database definitions **for the currently-selected database only** to be updated to the latest revision.
