

Top Yacht – Using Site Manager to Upload to multiple Web-sites.

To help clubs who run events together we can offer site manager uploads to multiple clubs' websites from the one database.

After setting this up you won't have to change user rego or internet information across clubs.

Pre-requisites

- You have the most recent versions of Site Manager and TopYacht.
- You have the internet log-in credentials for the target club/s.

Step 1:

Open the Internet Site Manager Page

Admin | Internet | Sites:

Screenshot of the 'Sites ver:10.8.7.1' application window. The 'Internet Site Name' field contains 'Alpha Club'. The 'Internet Site Settings' section includes: FTP Internet Address (topyacht.net.au), FTP Username (results@topyacht.net.au), FTP Password (masked), Port (21), Proxy Server (empty), Club Results Folder (clubbravo), Passive Mode (checked), and Manual Upload (unchecked). A 'New' button is visible below the settings.

- Click 
- Create a New Site name with '^' as the first character of the nominated name, with the remainder of the name being that of the target Club. For more than one club, repeat this process.
- Populate the Log-in Credentials for the target club/s

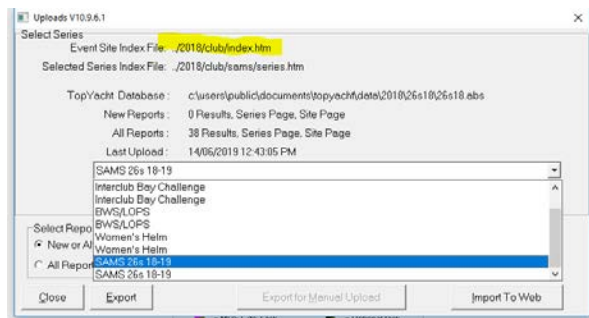

The '^' character instructs Site Manager to substitute the standard Club name (from the Club License) with the Club Name as entered with the '^'. The '^' is suppressed in the final print-out

Step 2:

- Create a new set of series for each of the target Clubs. These may be child series of the main parent series. **Admin | Series | Create a New Series**
- Open the internet series page **Admin | Internet | Series:**
- Set up each of the series in nominating the different site names (the ones with the '^'):

NAME	FOLDER	ACTIVE	SITE
Interclub Bay Challenge	ibc	False	Results on M00YC
Interclub Bay Challenge	inbay	False	^Beta Club
BWS/LDPS	bws	False	Results on M00YC
BWS/LDPS	lops	False	^Beta Club
Women's Helm	whs	False	Results on M00YC
Women's Helm	wom	False	^Beta Club
SAMS 26s 18-19	sams	True	^Alpha Club
SAMS 26s 18-19	sams	True	^Beta Club

When uploading you can send to just one site, via selecting just that one (double check the address in the window)

OR using the upload all new will send to both!
